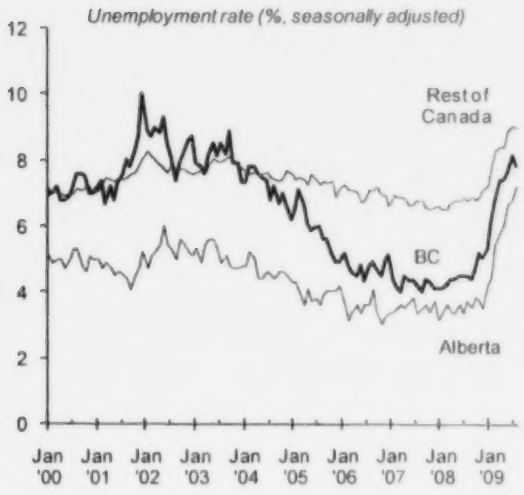
Labour Force Statistics ◆ July 2009

(All labour force statistics are seasonally adjusted, unless otherwise indicated)

Unemployment rate inches down to 7.8% in July

Jobless rates in BC and Alberta have increased more than in any other province, but are still below the average for the rest of Canada



BC Stats

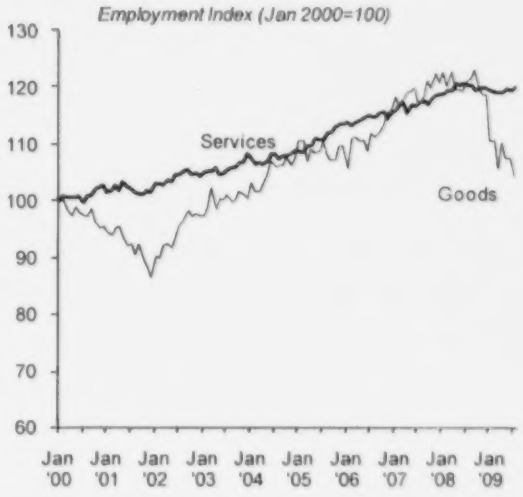
British Columbia's unemployment rate inched down to 7.8% in July, as a 0.3% drop in employment was outweighed by an even larger decline (-0.7%) in the number of people who were either working or looking for work.

Labour market conditions in BC, and other parts of Canada, have deteriorated significantly during the last year and a half. Jobless rates in the province had been falling since early in the decade, and British Columbia went from having a higher-than-average unemployment rate to one that was significantly lower than the national average. While the province's unemployment rate remains comparatively low, the size of the gap has shrunk to less than one percentage point.

BC's unemployment rate has nearly doubled during the last nineteen months, rising from 4.1% in January 2008 to 7.8% in July 2009. The increase was more rapid than in any other province except Alberta, where the rate climbed from 3.3% to 7.2% over the same period. By comparison, Ontario's unemployment rate (9.3%) in July was three percentage points higher than in January 2008.

The current recession has resulted in rising unemployment rates in every province. However, the change in unemployment rates is most marked in BC and Alberta. Other provinces, including Saskatchewan, Manitoba and parts of Atlantic Canada, have seen much smaller increases in the incidence of unemployment in recent months.

Job losses primarily in the goods sector



BC Stats

The effects of the current economic slowdown are very evident in the goods sector, where employment has dropped off significantly since peaking in the fall of 2008. Employment in service industries has been much more stable, declining only marginally over the same period. Since the service sector employs eight out of ten workers, this stability has helped mitigate the effect of job losses in the goods industries on the overall employment figures for BC.

The number of jobs in goods-producing industries shrank 2.9% between June and July, with most industries showing substantial declines. Forestry, fishing & mining (+3.2%) was the lone exception. Construction, the biggest employer, shed 2.1% of its workers, while the number of jobs in manufacturing fell (-3.6%) for a third straight month.

In the service sector, employment was down in accommodation & food services (-3.9%), education (-3.2%), management & administrative services (-1.6%), public administration (-0.9%) and "other" services (-6.7%). However, there were more people working in finance, insurance & real estate (+7.8%), transportation & warehousing (+3.1%) and retail & wholesale trade (+1.4%), which is the largest employer in the sector. Other key industries, including health care & social assistance (+1.6%) also took on more workers, and overall, employment in the service sector was up 0.3%.

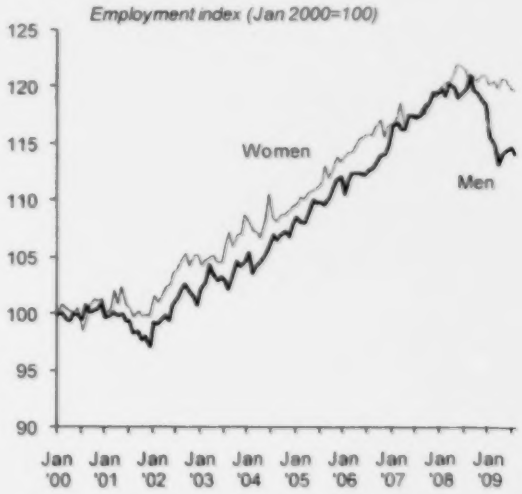
Fewer full-time jobs

With continued job losses in the goods sector (where full-time work is more common than in the service industries), the number of full-time jobs was down 0.7% in July. There were, however, 0.8% more part-time workers.

Public sector employment fell 0.4% in July, while the number of people working in the private sector dropped 1.3%, marking the third straight month in which private sector employment has fallen.

The youth (15-24) unemployment rate continued to climb, rising to 13.6% in July. Among workers aged 25 and over, the jobless rate was 6.7%. Men (8.4%) were more likely to be unemployed than women (7.0%).

Men have borne the brunt of the job losses



BC Stats

Job losses in all regions

Employment fell in all parts of the province, but Cariboo (-9.4%, *3-month moving average*), North Coast/Nechako (-8.5%) and Thompson-Okanagan (-7.7%) were hardest hit. Mainland/Southwest (-1.0%) saw only a marginal decline in employment in July. Among the regions, unemployment rates ranged from 6.4% in Vancouver Island/Coast to 14.2% in Cariboo.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Data Services at (250)387-0327 or write to BC.Stats@gov.bc.ca

Definitions and Explanatory Notes

Reference Week
Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force
The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed
Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment
Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate
The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate
The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate
The employment rate(employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding
Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC Stats on request.

Seasonal Adjustment
Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
